

# EYES

## EASY ENGINE SEARCH

## « You won't believe your eyes »

**EYES®** is a revolutionary visual multi-criteria, multi-research and dynamic knowledge mapping information technology developed by Atonis Technologies.  
**EYES® is based on seven years of R & D.**

In its present form, **EYES®** presents major industrial perspectives. **EYES®** is a flexible software model which is extremely parametric and non dedicated to a particular application or market segment. The **EYES®** environment represents visual information and knowledge software which utilises various model representations involving mapping, dynamic and multi-criteria research.

**EYES®** offers real answers to data mining by :

- Proposing new multi-criteria search
- Providing meaningful representation for search results
- Completes the search result list by providing information in an easy & exploitable form.

In its present industrial form, **EYES®** offers an alternative to data mining results which are represented as a list.

We have original scenarios which are very useful to search for objects that are alternatives to the current list view. A dynamic scenario stands by its simplicity, its functional value and its seductive character.

**AS OF TODAY AND TO OUR KNOWLEDGE, NO OTHER SOFTWARE PROVIDES THE FUNCTIONS FOUND WITHIN EYES.**

**EYES®** market segments

**EYES®** is able to interface with all information systems, it is tomorrow's solution for your research solutions.

**SoftWare Vendors** - Improve and differentiate the functionality of your software.

**CTOs.** - Provide your employees with a collaborative search engine databases.

**RH** - Facilitate the recruitment, management skills and improve staff training strategy.

**Marketing** – offers a simple platform in order to increase sales for your customers and for your sales teams.

**EYES®** provides software publishers, webmasters, IT companies, major commerce web-sites with an innovative and original product in order to differentiate their offerings within a "hyper" competitive environment.

Easily recoverable with any information system, **EYES®** is easily adaptable to all types of data and the existing IT architecture.

**EYES®** helps to provide useful and original screenplays of search objects that are alternatives to the heavy "list mode" scenarios.

It is naturally intended for solutions such as :

- Network Management and major social or professional groups
- Human Resource management
- Multimedia document management
- Online catalogs
- Software Vendors within an OEM type environment
